**Protect, Prevent and Save Your  
Computer Systems TODAY**

**by  
Timothy Jon Frenz**

Praise for Timothy Jon Frentz's  
COMPUTER SAVER SOLUTIONS

OTHER BOOKS  
BY TIMOTHY JON FRENTZ

Quotes from readers and reviewers are the best way to judge the content of an eBook before paying for it yourself. As readers like you send us your testimonies we will put our favorites on this page each time we email a copy to a new reader!!! Thank you for your support.

Tim never ceases to amaze me with his intelligence and ambition to make this a better world for all of us, especially those of us with a computer and the ability to take advantage of technology. I hope you will find COMPUTER SAVER SOLUTIONS as inspiring as I do!

-jankp2@peacemail.com

Tim Frentz has a great handle on technology. I have seen the methods and solutions in this report work for him and others on a daily basis. Quick and to the point, this book is highly recommended reading!

-cosmicravenstar@yahoo.com

I have been amazed at what he can achieve! From research and persistence he sponsored a trip throughout the Pan Pacific to research Alternative Energy advancements. If I need a product or service I contact Tim first, safe in the knowledge that he will always know where to go and whom to contact! You always have a friend in Frentz!

## **FOREWORD**

After reading this REPORT write up your own foreword and submit by email to [tfrentz@hotmail.com](mailto:tfrentz@hotmail.com) and it may be chosen. You will be accredited with a published foreword for your resume. This will come in handy when looking for a literary related job.

# INTRODUCTION

Computer Saver Solutions is divided into three chapters: Protecting & Preventing, Hardware and Software Saving Solutions. This REPORT will give you detailed instructions on how and when to use solutions to protect, prevent and save your computer systems.

Computer Systems are very fragile. One wrong mouse click can let a trojan VIRUS into your computer and cause days of system saving maintenance and lead to a support bill worth more then the value of the computer. An initial 30 minute review of the system should be completed by an expert like Tim Frentz before taking further action. Several things can lead to the decision to replace a computer. One should consider the following reasons as justifiable.

- 1.) The current computer does not support hardware upgrades. PCI Express, USB improvements and Bluetooth are a few examples.
- 2.) The current computer motherboard begins failing. Mouse or Keyboard port failure for example.
- 3.) Software upgrades begin giving errors. Shortage of memory or frequent lock ups for example.

Use of basic prevention and maintenance tools can help prolong the life of the computer to help it reach the balancing point where one of the 3 reasons above are met. 99% of the time solutions can be found within 2 hours to return the computer to an efficient state. This is also heavily factored in declaring that a new computer be purchased.

Now that computer hardware pricing has reached the equilibrium point between manufacturing cost and public acceptance, new computers are an annual expense. On Black Friday of every year it is recommended that home and office computers be swapped out and new ones be purchased with the holiday pricing. Upgraded memory, drives and PCI-Express cards should be pulled and transfered every other year. This assures that the owner will maintain a yearly warrantee and retain top dollar value and performance.

Consult this reference report and software solution package any time your system is not performing as expected.

- Tim Frentz

# CHAPTER ONE

## Protecting & Preventing Problems

This guide begins with a scenario that a new computer has just been purchased and the goal is to take all efforts possible to protect the computer and prevent any malicious variables from infecting the system.

If you are looking for detailed discussions on specific problems, the purchase of this report gives you access to Frentzs support blog. It is through the Blog and Instant Messenger support that we will help you through certain problems. There are so many variables with corrupted computer systems that if we started listing them, this report would turn into a novel and we would have to raise our price.

Now that you have a new computer you will want to .....

There are a lot of options available for purchase from developers and manufacturers. We recommend ....

One of the biggest benefits of contributing to our network is getting access to our consulting service. Read more about our hardware recommendations in the next section.

# CHAPTER TWO

## Hardware Solutions

This guide is specific to hardware solutions for the protection and prevention of common problem causing issues. If you are in need of additional solutions for specific projects then you will need to contact us through the blog or IM access we give you.

There are so many variables with sick computer systems that if we started listing them, this report would turn into a novel and we would have to charge more money.

We recommend you consult us to decide what hardware you may or may not need. With the goal of protecting and preventing in mind we will ....

Several combinations of Internet security and privacy services, both hardware and software are available. The key is to use ...

Layers of defense are the best approach, so you should have two firewalls (software and hardware) and two ...

### What is a Firewall?

A firewall is ....

You can set up rules like this for FTP servers, Web servers, Telnet servers and so on. In addition, you can control how users connect

to Web sites, whether files are allowed to leave the system over the network and so on. A firewall gives you tremendous control over how people use the network.

Firewalls use one or more of three methods to control traffic flowing in and out of the network:

- 1.)
- 2.)
- 3.)

### What are the two main differences in the Firewall hardware?

One is .....

A common Firewall product for home use is the SonicWALL TZ 150. It retails for around \$275 and only includes bare basic features.  
<http://www.cdw.com/shop/products/default.aspx?EDC=732219>

We have a partner product that is sold for less and has 5x the amount of features. For registering the purchase of this guide we make this product available to you today. The biggest factor in price is the amount of licenses (computers) that can work with a firewall. With our solution we can configure it for as many systems as requested for a lot less than an OEM model.

### What if your system has been infected?

One of the biggest benefits of contributing to our network is getting access to our consulting service. Read more about our software recommendations in the next section.

# CHAPTER THREE

## Software Solutions

This guide is specific to software solutions for the protection, prevention and saving from common problem causing issues. If you are in need of additional solutions for specific projects then you will need to contact us through the blog or IM access we give you.

There are so many variables with sick computer systems that if we started listing them, this report would turn into a novel and we would have to charge more money.

We recommend you consult us to decide what software you may or may not need. With the goal of protecting and preventing in mind we will only discuss our endorsed solutions in this guide. They have been numbered to match the install files included with this guide for easy reference. We are strong supporters of the Linux platform and can help you load Linux to run on your system. Linux is a separate report available by request.

To get started you will need one of the top compression tools to extract our software archive. We have included the ....

Starting with protection and prevention we recommend a FREE Antivirus program from ..... You will want to install this and run the updater immediately.

Our next solution will provide a second level of Virus protection and will stop any signs of unwanted activity. It will allow you to isolate and delete each item individually so you can see what dangers are lurking from your daily computer use. ....(3) is perfect for this. We have included a similar product called ..... (4) for you to use also if you think there is a chance ..... is missing something.

For specific error messages we have included ..... (5) for memory
